

Figure 1 displays a 4x3 grid of line graphs illustrating the relationship between the number of children (X-axis) and the number of children who are also parents (Y-axis). The graphs are arranged in a 4x3 grid, with the first row showing a positive relationship, the second row showing a negative relationship, the third row showing a positive relationship, and the fourth row showing a negative relationship. Each graph has 'Number of children' on the x-axis and 'Number of children who are also parents' on the y-axis. The data points are connected by lines, and the lines are color-coded: green for positive, red for negative, blue for positive, and yellow for negative. The graphs are labeled with 'Number of children' and 'Number of children who are also parents' in the top left corner.

Row	Relationship	Line Color	X-axis Label	Y-axis Label
1	Positive	Green	Number of children	Number of children who are also parents
2	Negative	Red	Number of children	Number of children who are also parents
3	Positive	Blue	Number of children	Number of children who are also parents
4	Negative	Yellow	Number of children	Number of children who are also parents
