

Translational Utility of WGCNA Modules

Module eigengenes discriminate age groups, associate with training response, and link to phenotypic change.

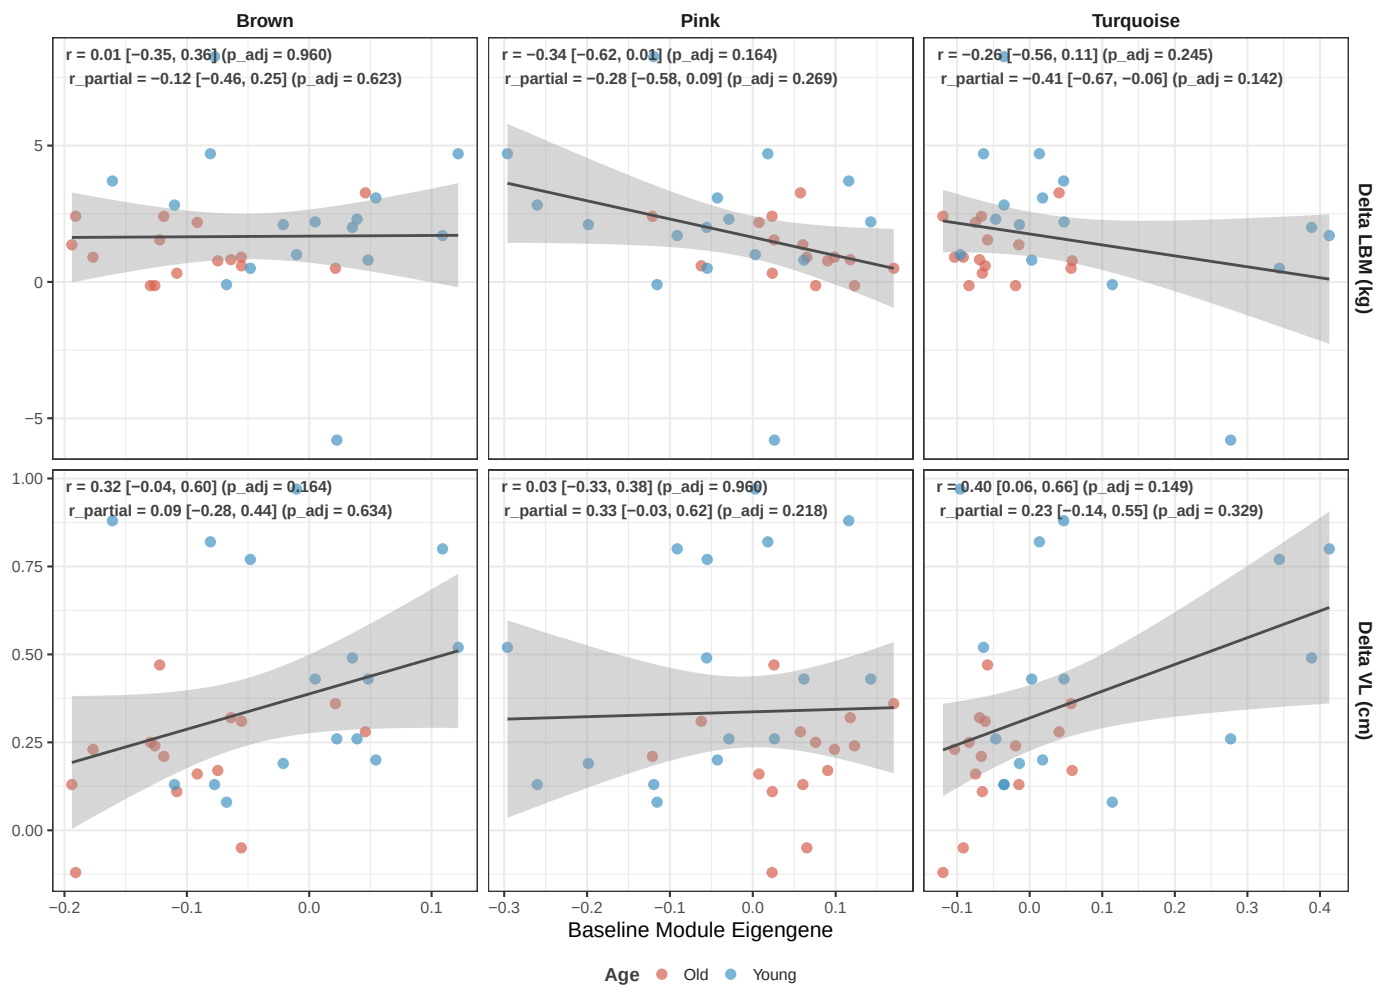

A Age Discrimination via Module Eigengenes

PCA of 10 baseline eigengenes | nested LOOCV (top 5 per fold)

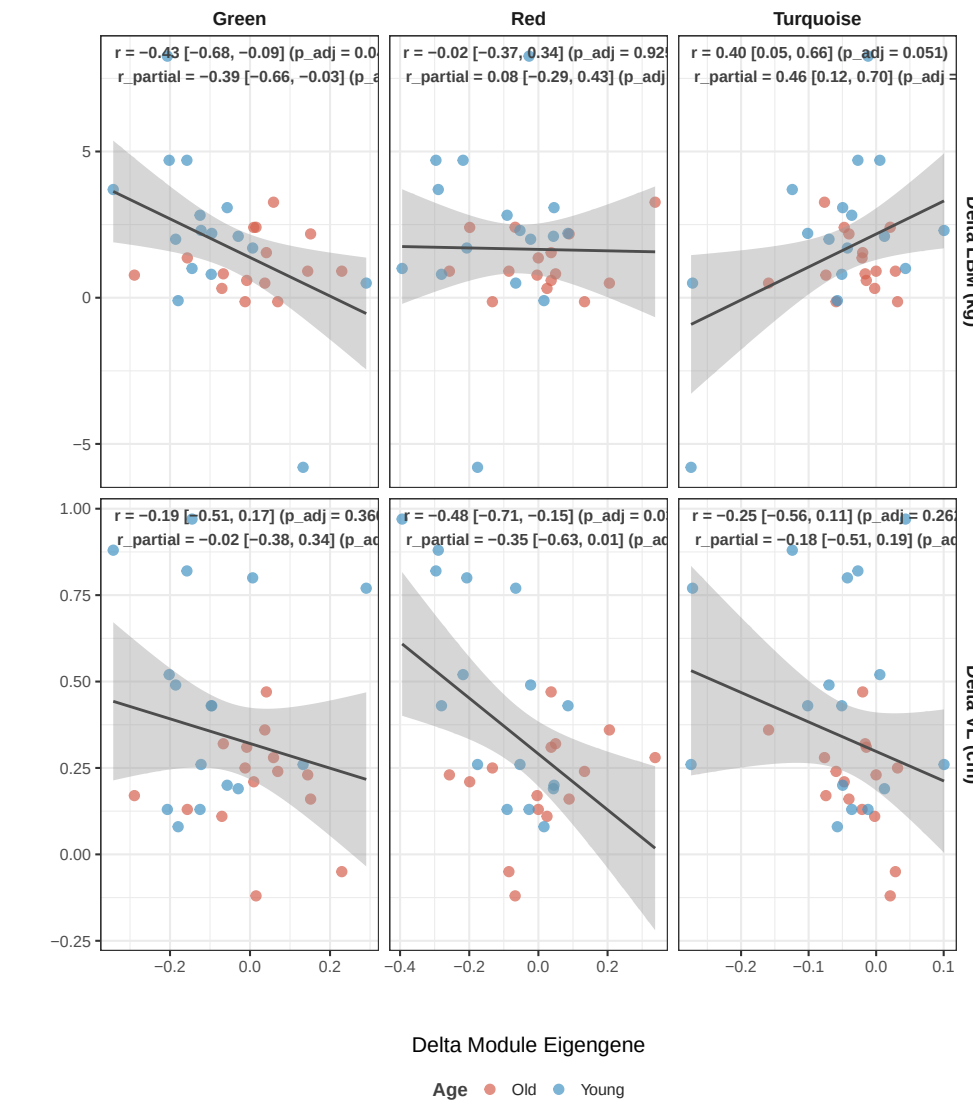

B Baseline Eigengene Associates with Training Response

Baseline module eigengene (Pre) vs change in phenotype

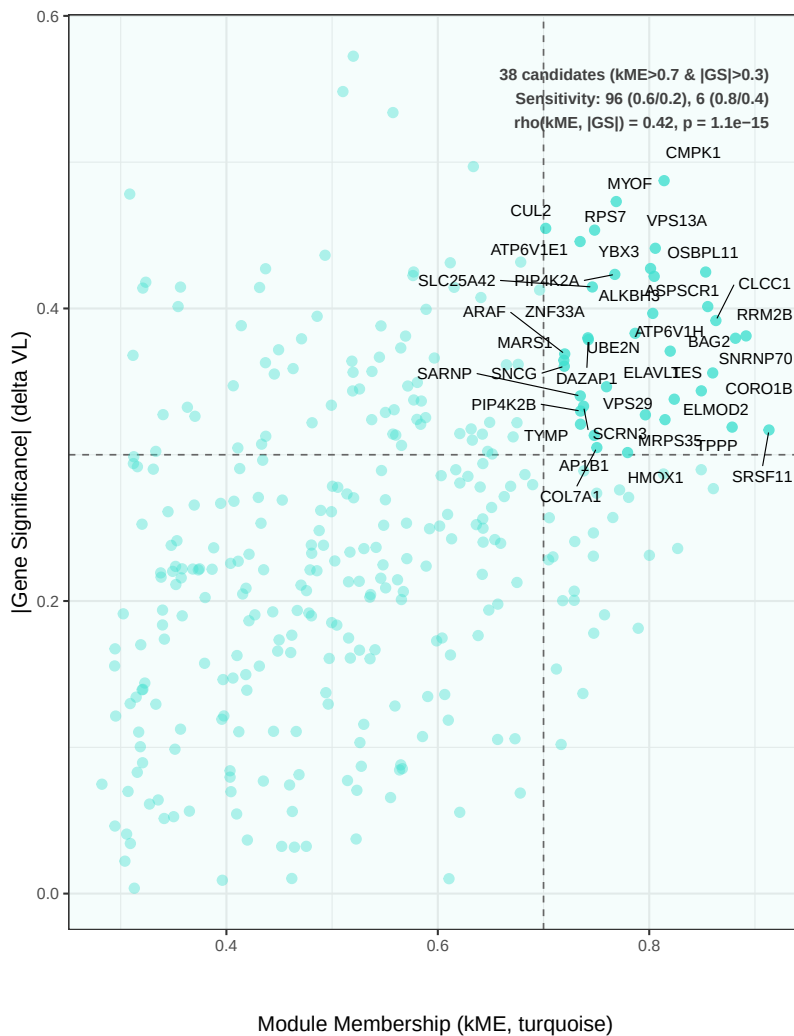

C Training-Induced Module Changes Track Phenotype

Delta eigengene (Post-Pre) vs delta phenotype

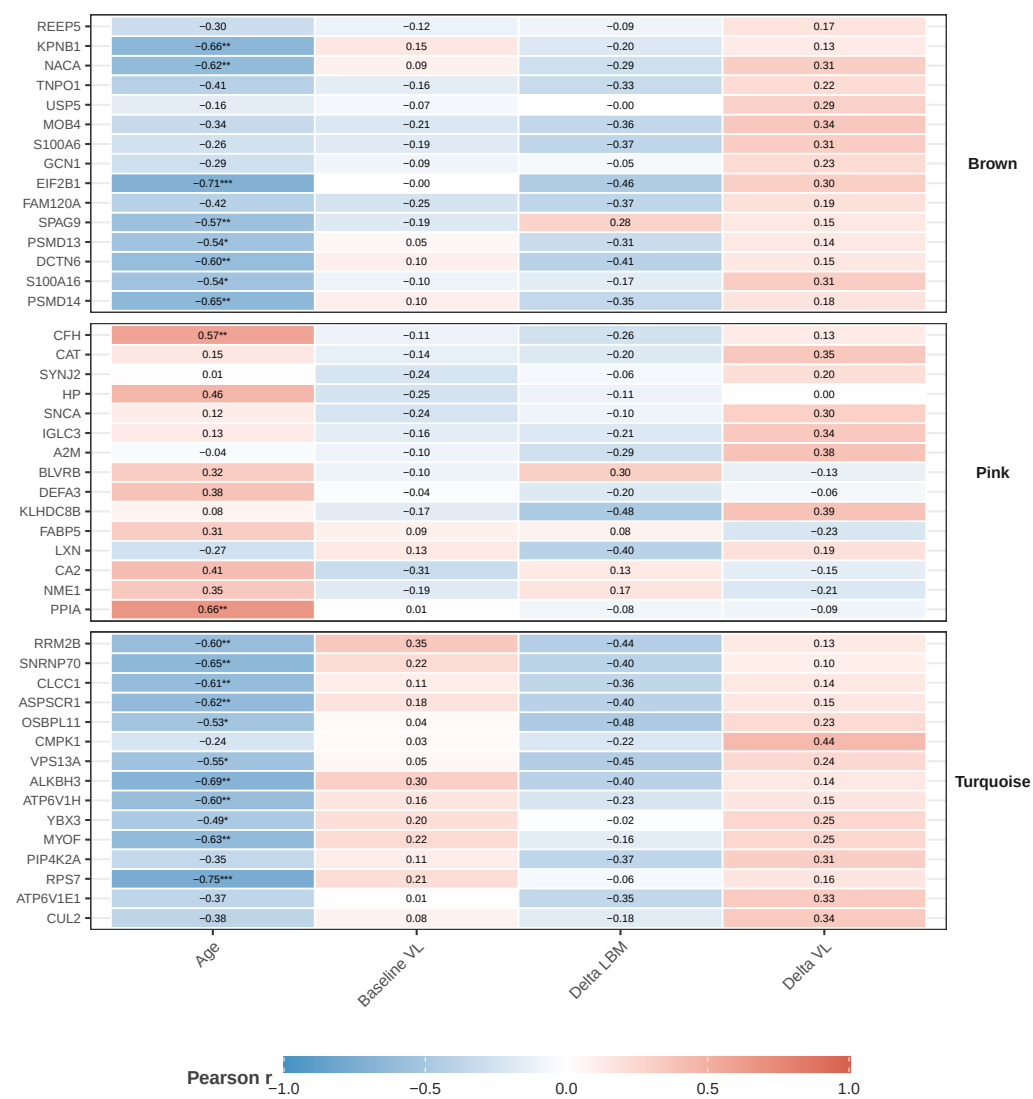

D Hub Proteins (Turquoise Module)

Module Membership vs |Gene Significance| for delta VL

E Protein-Phenotype Associations

Top hub proteins (baseline vs traits) | BH-corrected across 180 tests | Delta traits adjusted for age group

Age: Young Old

Top Modules: Turquoise

Pink

Brown

Pearson r: -1 0 +1

Phenotype: . VL
