

E Hub Protein Networks

Top 30 by kME | node size = kME, color = gene significance | hulls = GO BP | sidebar = module-trait r
Context ring: all remaining module proteins (size = kME, color = GS, alpha = 0.38) | radial position ~ kME

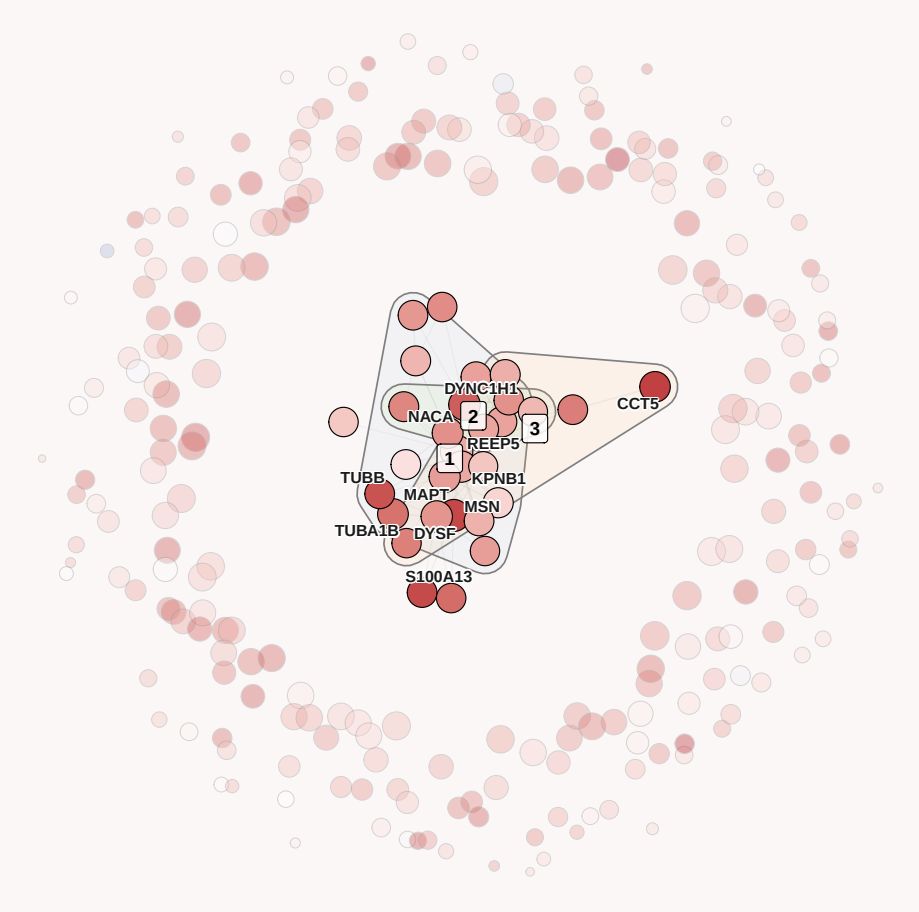

Blue (n=295)

GS: Type II fCSA
1=Carboxylic acid metabolism | 2=Organic acid catabolism | 3=Small molecule metabolism

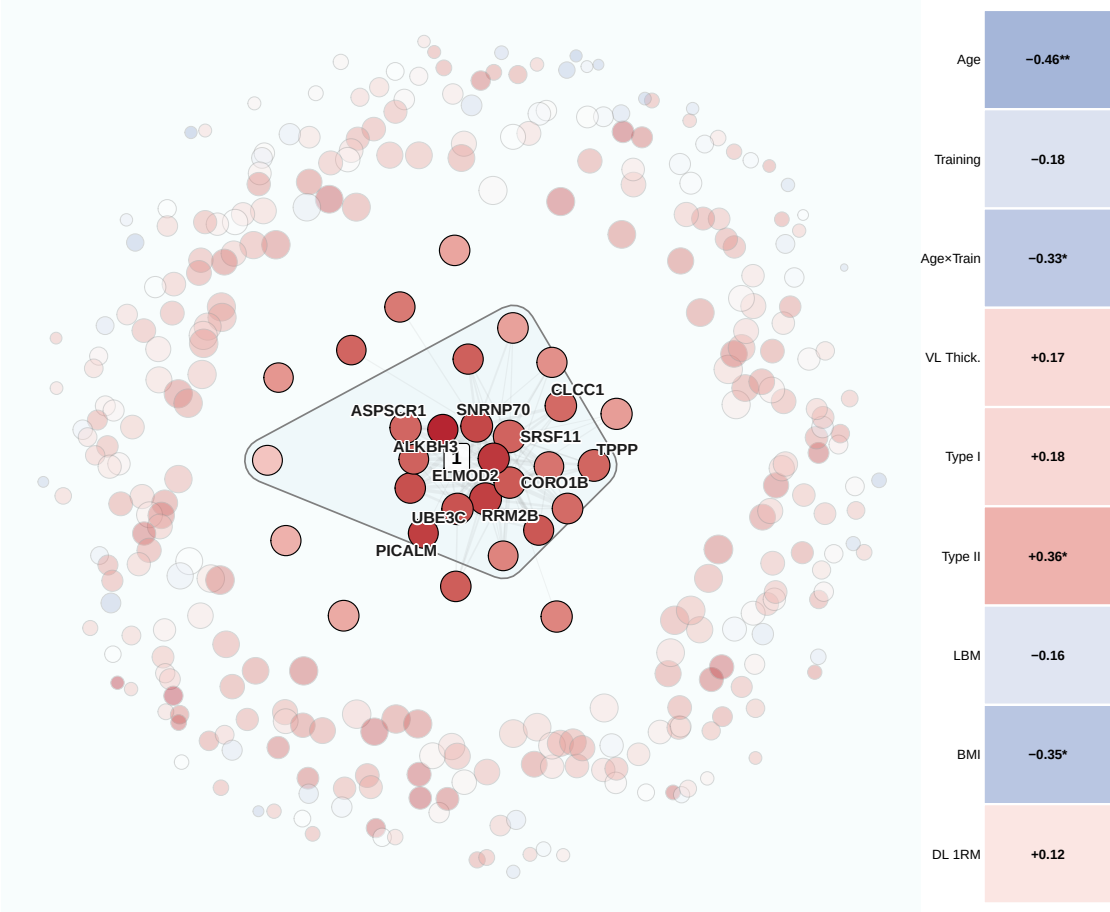

Brown (n=266)

GS: Training
1=Microtubule process | 2=Proteasomal protein catabolism | 3=Protein folding

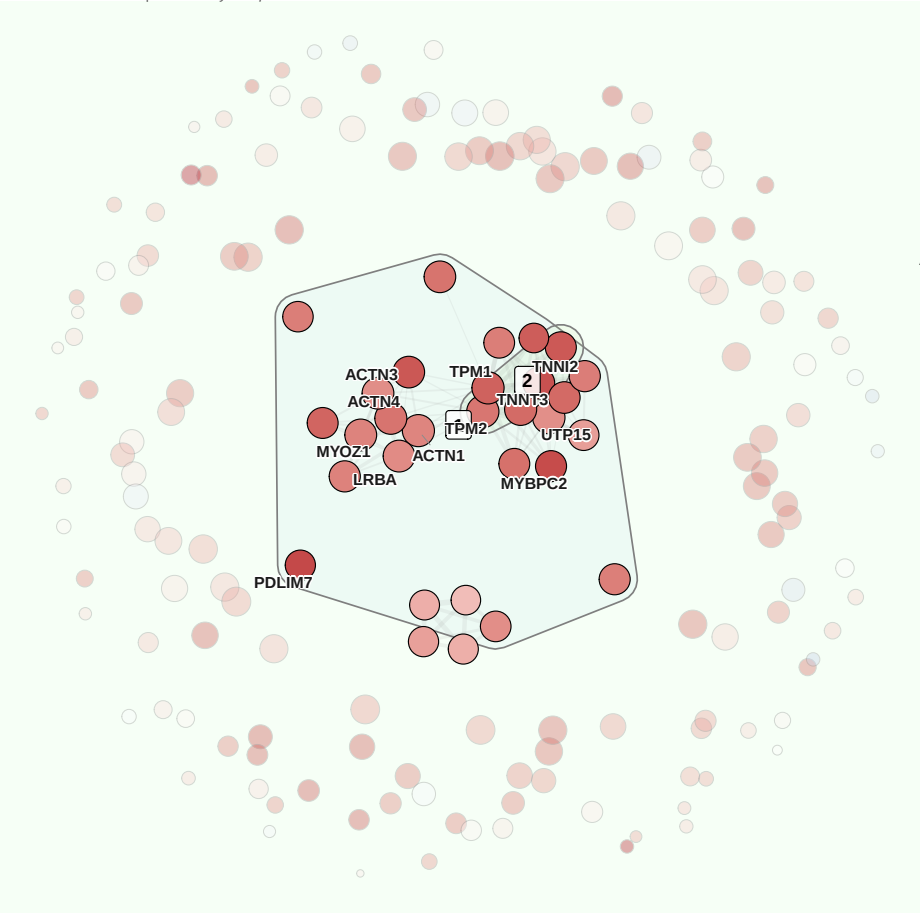

Turquoise (n=332)

GS: Type II fCSA
1=Protein modification process

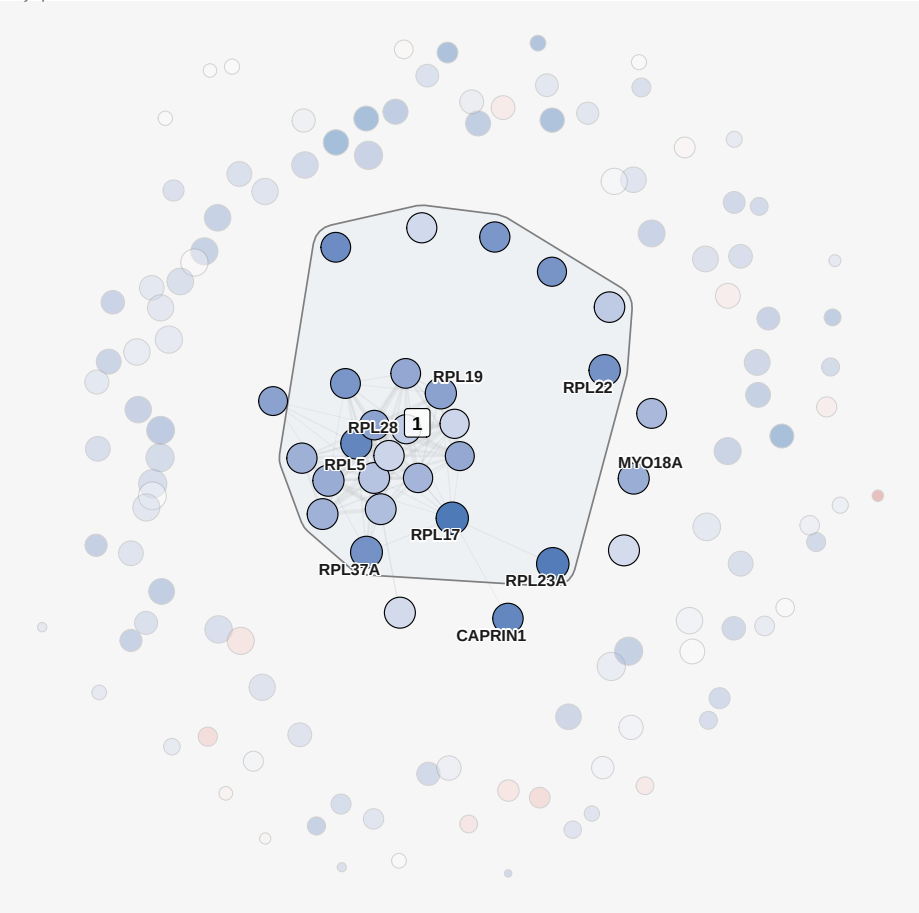

Green (n=175)

GS: VL Thickness
1=Muscle structure dev. | 2=Muscle system process

Black (n=139)

GS: Age
1=Cytoplasmic translation

Pink (n=94)

GS: Age
1=Acute inflammatory response | 2=Hydrogen peroxide catabolism | 3=Immunoglobulin mediated immune response
