

F07 Supplementary – Per-module ROC grid: signal decomposition across outcomes
Each cell = univariate AUC from one module eigengene. Border: thick solid black = BH $q < 0.05$, thick dashed black = nominal $p < 0.05$, thin grey = ns (1000 perms)

Row 1 (Age): Combined ME = (Pre+Post)/2 per subject, n=30. Row 2 (.VL responder): median-split of age-residualized .VL, predictor = Pre ME. Rows 4-5 (age-specific Pre vs Post): paired within subject.
