

F07 Supp — LOSO sensitivity on top-12 module-outcome AUCs

Module assignments held fixed (full-sample WGCNA); eigengene PC refit per LOSO fold and held-out subject projected onto training PC.

Median drop = -0.000. A drop >> 0 indicates optimism; a drop ≈ 0 indicates the eigengene projection is stable. Module-definition circularity is NOT tested by this partial LOSO — a full WGCNA-refit LOSO is a separate, more expensive analysis.
