

The diagram is a circular chord diagram illustrating the distribution of 15 enzymes across three metabolic pathways: Organic Acid Catabolism, AA Catabolism, and FA Catabolism. The enzymes are listed on the right side of the diagram, and their connections to the pathways are shown by colored arcs (chords) extending from the enzyme labels to the pathway segments. The pathways are represented by large, semi-circular segments at the bottom of the diagram, with Organic Acid Catabolism in red, AA Catabolism in teal, and FA Catabolism in red. The enzymes are listed on the right side of the diagram, with their corresponding enzyme names: ACAT1, ALDH4A1, ALDH5A1, ALDH6A1, CROT, DDOX, ETEA, ETEB, GPT2, HADHA, HADHB, MCC1, MCEE, MRST, and TST. The diagram uses red and teal colors to represent different enzyme groups and their connections to the pathways.

The diagram illustrates the distribution of 45 genes across five biological processes. The processes are represented by segments of the outer ring, and the genes are listed around the perimeter. The thickness of the blue chords indicates the strength of the association between a gene and a process.

Biological Processes (Outer Ring Segments):

- Muscle Cell Differentiation
- Reactome Activated Muscle Contraction
- Myofibril Assembly
- Muscle Cell Development
- Actomyosin Structure Org.

Genes (Perimeter Labels):

The circular chord diagram illustrates the relationships between 15 genes and 5 biological processes. The genes are arranged around the top arc, and the processes are around the bottom arc. Chords connect genes to processes, with thickness representing the strength of the relationship. The genes are: ACTN3, MYH1, MYH3, MYLK, MYH11, MYH2, PDLIM3, SLC10, SYT10P2, MYH3, MYH1, PDLIM5, PLEC, MYH11, and MYH2. The processes are: Myogenesis, Muscle Cell Development, Muscle Cell Differentiation, Myofibril Assembly, and Muscle Tissue Development.
