

Training–Effect Concordance Across Age Groups

Protein–level and pathway–level concordance between young and old training responses, plus interaction DEPs.

Training Effect (Young)

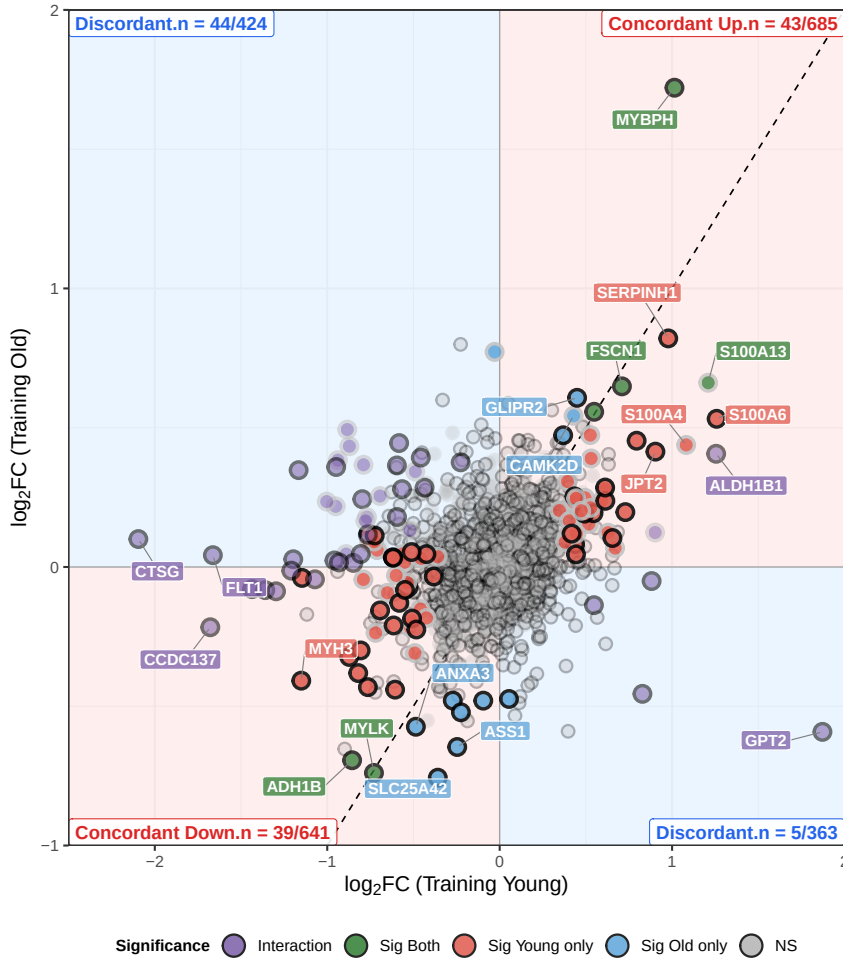

Training Effect (Old)

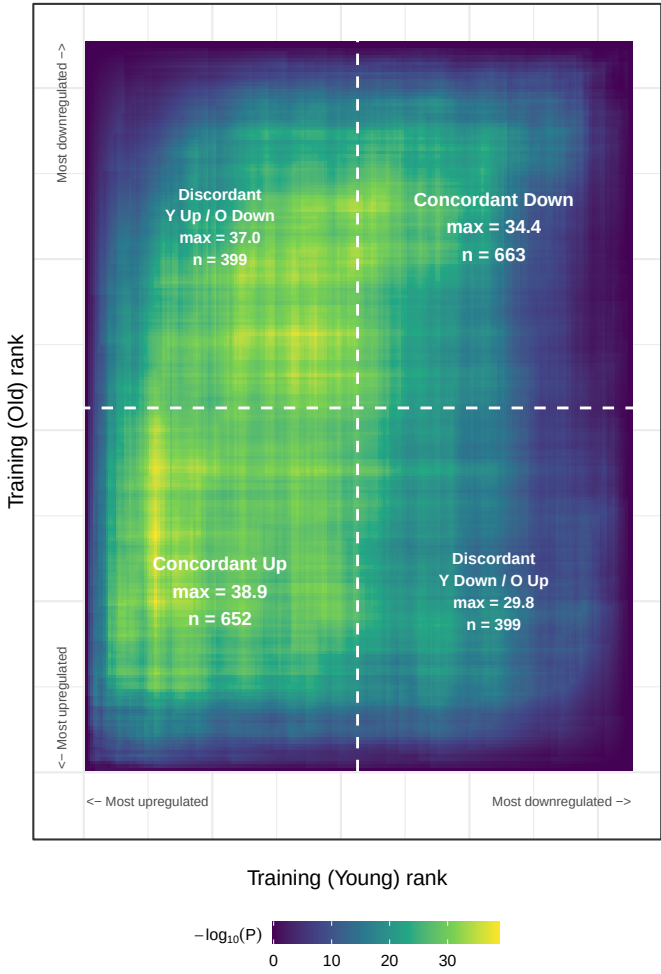

Protein–Level Concordance of Training Response

logFC Training Young vs Old | 2,113 proteins | $r = 0.26$, $\rho = 0.30$, concordance = 65% | border =

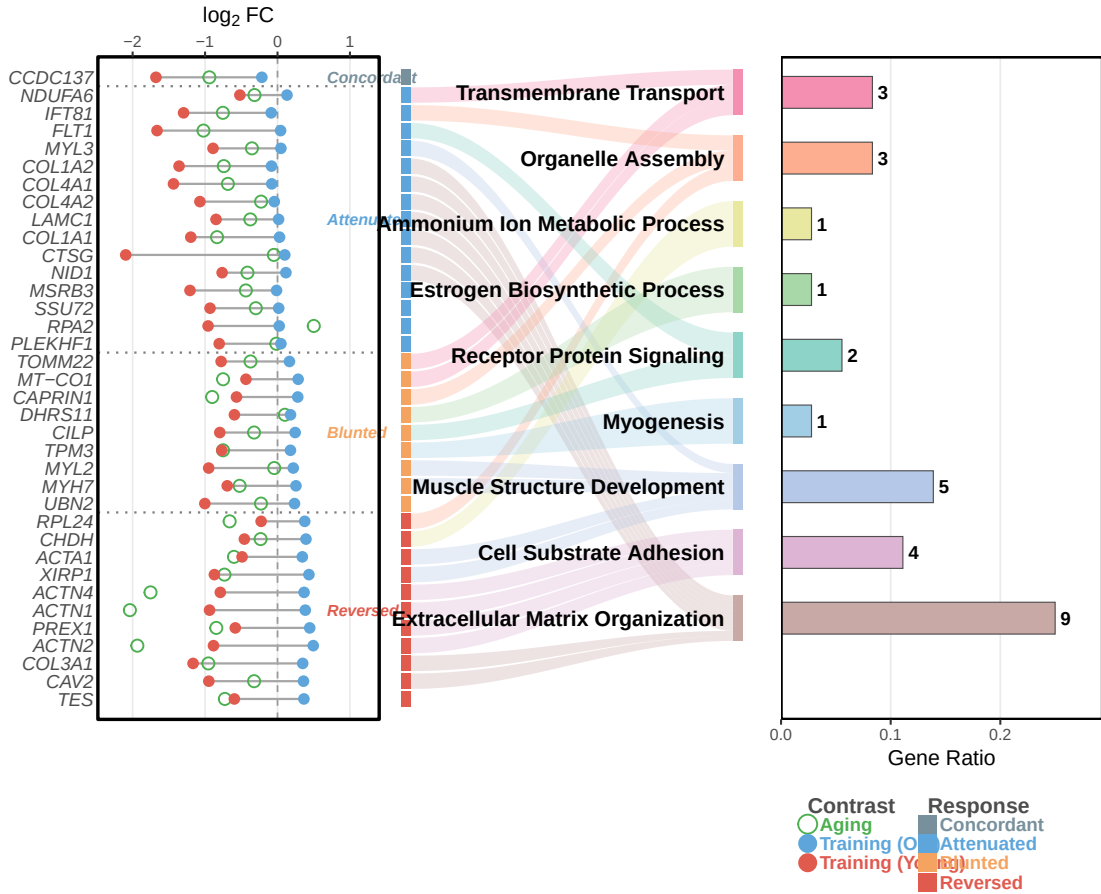

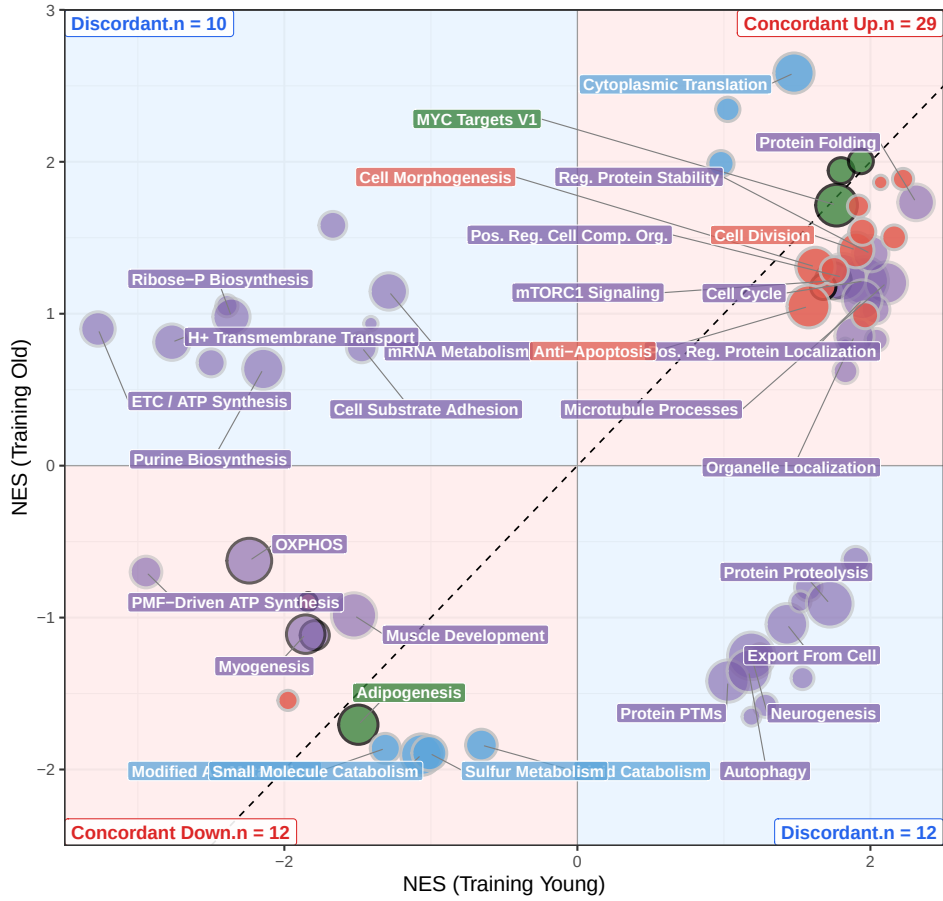

Threshold–Free Concordance (RRHO)

Two–sided hypergeometric overlap | 2113 shared genes | step = 10

Pathway–Level Concordance (fGSEA)

Hallmark + GO:BP (rrvgo–reduced) | padj < 0.05 | 63 pathways | $r = 0.34$, $p = 0.006$

Direction: Up Down Database: Hallmark GO:BP Significance: Interaction Sig Both Sig Young only
