

A Per-Protein Variability (CV%)

CV% Pre vs Post | 2,113 proteins | $Y r = 0.67$, $O r = 0.74$, $\Delta CV r = 0.04$

B Inter-Individual Variability (CV%)

Group CV% per Age $\times$ Time | 2,113 proteins
median 24% [24–25 CI] | $Y +1.7\%$, $O -2.2\%$

C Intra-Individual Proteomic Variability

Per-subject $\Delta \log_2 FC$ (Post – Pre) | 2,113 proteins | 17% imputed | Wilcoxon age $p = 0.77$
