

A

Per-Protein Variability (CV%)

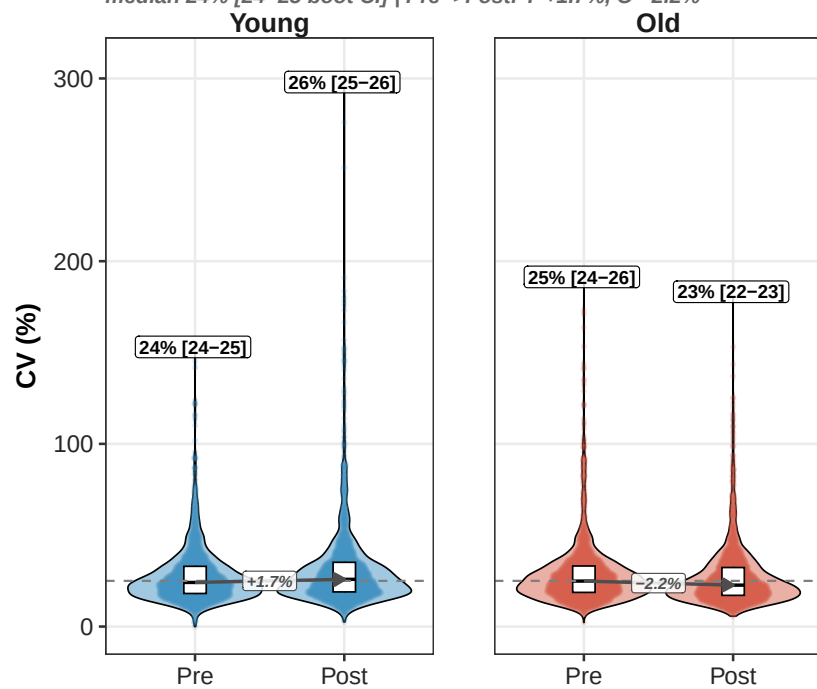

Per-protein CV% Pre vs Post – measurement reproducibility | 2,113 proteins (cycloless-normalized)
Young $r = 0.67$, Old $r = 0.74$ | delta-CV concordance $r = 0.04$ (no systematic training shift)

B

Inter-Individual Variability (CV%)

Group-level CV% per Age x Time | 2,113 proteins
median 24% [24–25 boot CI] | Pre→Post: Y +1.7%, O -2.2%

C

Intra-Individual Proteomic Variability

Per-subject delta-log₂FC (Post – Pre) | 2,113 missForest-imputed proteins
17% imputed (12% MNAR-derived) | age effect Wilcoxon $p = 0.77$
