

A In-sample per-module ROCs (top 12 of 48, ranked by permutation p)

In-sample (resubstitution) AUC: held-out LOSO controls in Supp C-E. Top 12 of 48. Border: solid = BH $q < 0.05$, dashed = nominal $p < 0.05$.

B Module-phenotype coupling (exploratory, age-stratified)

Hypothesis-generating: hand-picked at raw $p < 0.10$; 6/180 raw $p < 0.05$, 0/180 survive BH (not FDR-significant)
