

Supplementary Figure S5: WGCNA Module Characterization
Full functional triptych, GO enrichment, and hub protein networks | 9 modules

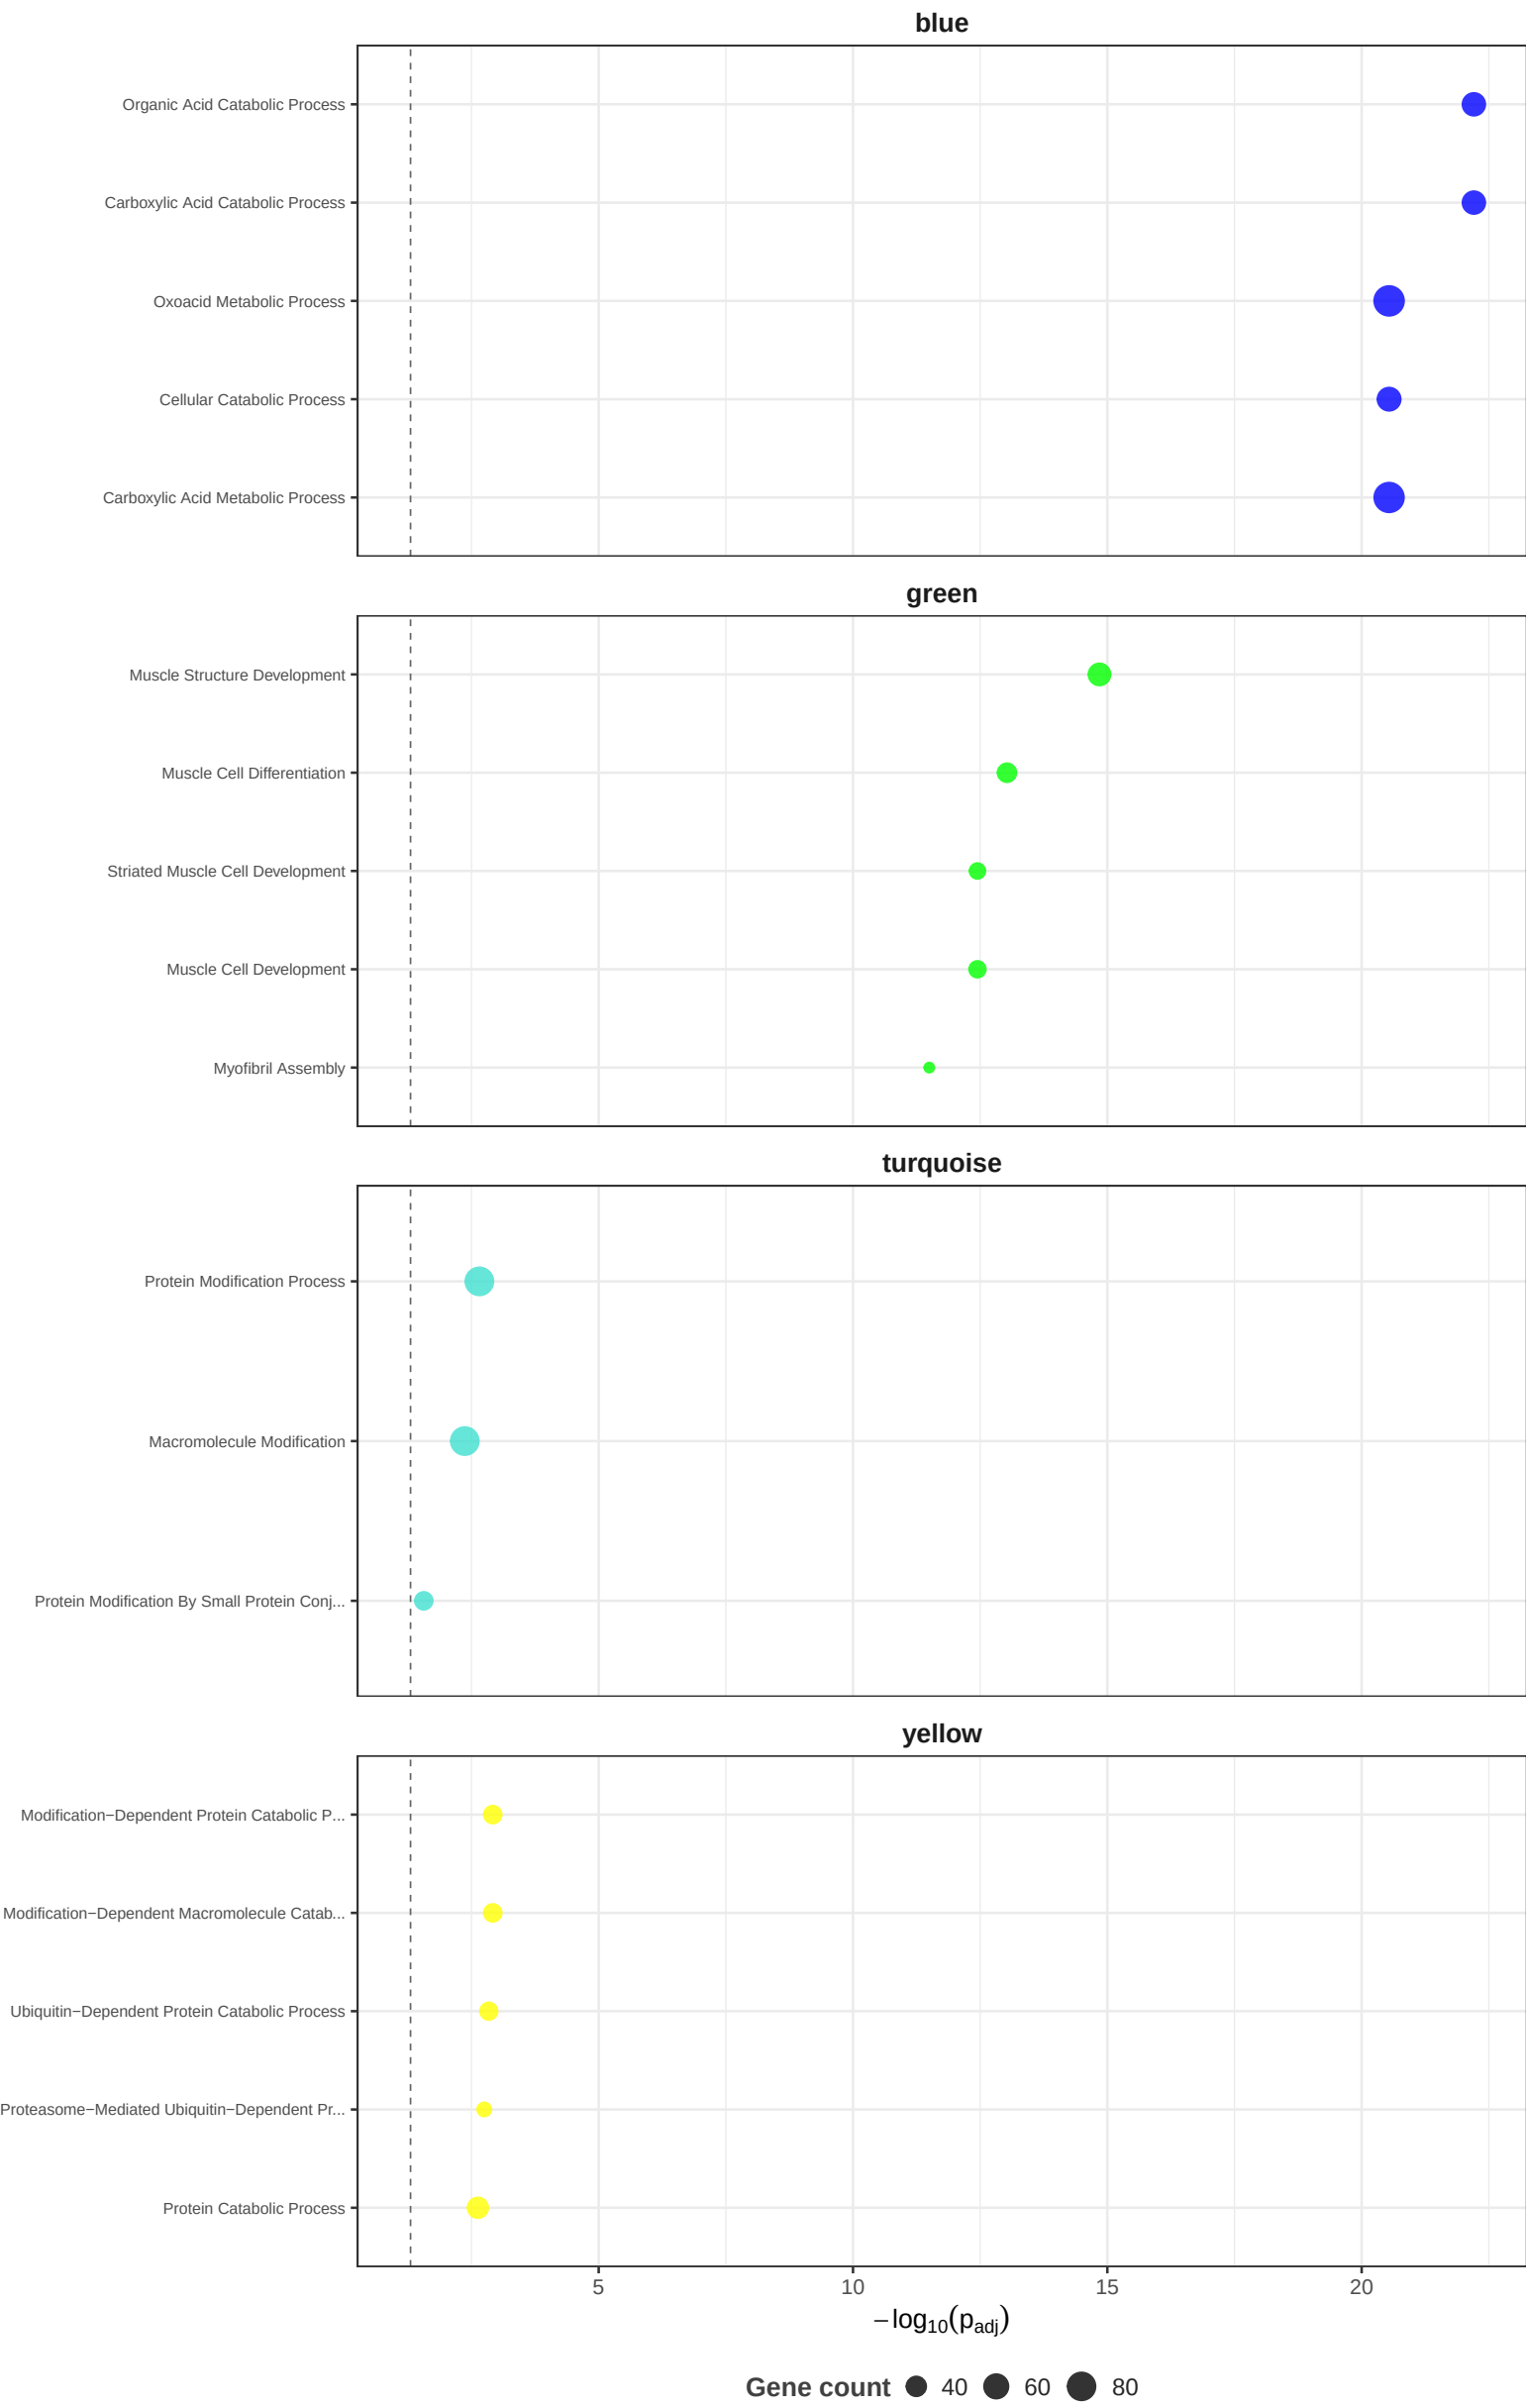

C Module Functional Characterization

Z-scored group means | Gene-pathway Sankey | GO enrichment | Trait *r* | Eigengene slopes

D GO Enrichment

Top 5 GO terms per key module (BP preferred; fallback to CC/MP)

E Hub Protein Networks

Top 30 by kME | node size = kME, color = gene significance | hulls = GO BP | sidebar = module-trait *r*
Context ring: all remaining module proteins (size = kME, color = GS, alpha = 0.38) | radial position = kME
