

A

Per-Protein Variability (CV%)

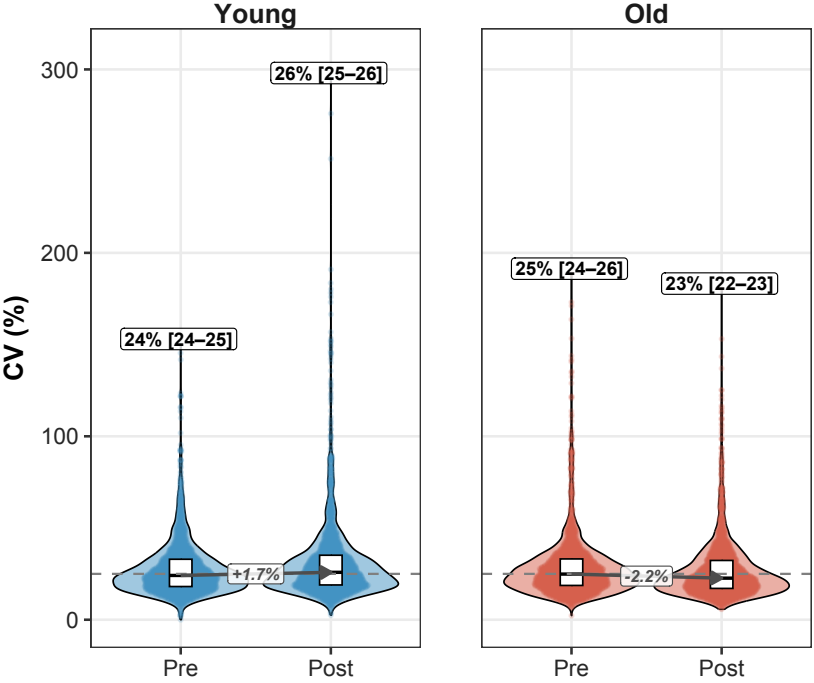

Per-protein CV% Pre vs Post — measurement reproducibility | 2,113 proteins (cycloess-normalized)
 Young $r = 0.67$, Old $r = 0.74$ | delta-CV concordance $r = 0.04$ (no systematic training shift)

B

Inter-Individual Variability (CV%)

Group-level CV% per Age x Time | 2,113 proteins
 median 24% [24-25 boot CI] | Pre->Post: Y +1.7%, O -2.2%

C

Intra-Individual Proteomic Variability

Per-subject delta-log₂FC (Post - Pre) | 2,113 missForest-imputed proteins
 17% imputed (12% MNAR-derived) | age effect Wilcoxon $p = 0.77$
