

Figure 1 displays a 4x3 grid of line graphs illustrating the relationship between the number of children (Y-axis) and the number of children who are also parents (X-axis). The graphs are arranged in a 4x3 grid, with the first column showing the relationship for the first child, the second column for the second child, and the third column for the third child. The Y-axis represents the number of children (0 to 1.0) and the X-axis represents the number of children who are also parents (0 to 1.0). The graphs show that the relationship is generally positive, with the number of children who are also parents increasing as the number of children increases. The graphs are labeled with the number of children (1, 2, 3, 4) and the number of children who are also parents (1, 2, 3, 4).
