

C. Top layer → L200 sensitivity vs top-12 cross-layer AUC

Color indicates the layer that is most sensitive to the top-12 cross-layer AUC. The color scale ranges from 0.0 (blue) to 1.0 (red). The color scale is based on the top-12 cross-layer AUC.

D. Top layer → Full WCCN+L200 sensitivity

Color indicates the layer that is most sensitive to the top-12 cross-layer AUC. The color scale ranges from 0.0 (blue) to 1.0 (red). The color scale is based on the top-12 cross-layer AUC.

Top 10 cross-layer pairs by frequency per layer. Model size = 4.1M
